### **LAWN REMOVAL REBATE PROGRAM**

The City of Greenfield offers a Lawn Removal Rebate program to provide financial assistance to customers wishing to replace high water using lawns with water-efficient landscape choices. The rebate amount is \$1.00 per square foot, up to \$1,000 for single family residential customers. This rebate program is for single family residential customers and properties only. One rebate per property per calendar year. The amount of rebate may not exceed the customer's actual cost. This rebate program is available on a first-come-first-serve basis subject to funding availability.

#### **Rebate Eligibility Requirements**

- The property must be at a location served by the City of Greenfield. The applicant must be the property owner or an authorized agent.
- All projects must be approved by the City prior to lawn removal and replacement. An on-site pre- and post-conversion inspection by the City is required.
- Lawn must be well-maintained and contain an in-ground operational irrigation system. Hand watered lawn or lawn removed before a pre-inspection site visit will not qualify for the rebate.
- Lawn must be replaced with very low or low water use plants or permeable landscape surfaces such as mulch, decomposed granite, flagstone, gravel, or permeable pavers. Turf seed, sod, vegetable gardens, vineyards, medium and high water use plants, lawn ornaments, impervious surfaces, cement, decking, curbing, hot tubs, pools, building extensions, retaining walls, sheds, trellises, playground materials, and fences do not qualify as allowed landscape surfaces.
- Lawn landscape plan, plant selection, and permeable landscape surfaces must be approved by the City prior to lawn removal and replacement.
- Planted areas must be covered with at least 2" of mulch material. If a weed barrier is used below the mulch, the weed barrier must be permeable to air and water.
- Pop-up sprinklers must be removed or capped from the converted landscape area. Any remaining landscape near the converted area must be irrigated with a separate valve.
- A separately valved, drip irrigation system is required for the converted landscape area. The system must be in good working order, free of leaks and malfunctions, and designed to avoid runoff.
- Landscapes of new construction projects do not qualify for the rebate program
